

Jitendra Vishwakarma

Senior QA Automation Engineer | SDET

Playwright • TypeScript • WDIO • Selenium • AI-Driven Test Automation
Mumbai, Maharashtra, India | +91 8169075328 | jitendrait291993@gmail.com | LinkedIn

PROFESSIONAL PROFILE

Senior QA Automation Engineer with 4.5+ years of experience building and evolving test automation frameworks (Selenium → WDIO → Playwright/TypeScript) across banking, fintech, and mobile platforms. Led framework migrations and architecture decisions, including a full WDIO-to-Playwright transition on a core banking project driven by client requirements. Applies LLM-assisted approaches to test design and edge-case coverage, reducing manual test-authoring effort. Experienced in compliance-driven testing (AML/sanctions screening), multi-system data validation (Kafka, MongoDB, SQL), and CI/CD integration (Azure DevOps, Jenkins). Mentors engineers on framework design and debugging, and owns release sign-off across regression, smoke, and sanity cycles.

CORE SKILLS

Automation & UI: Playwright (TypeScript), WebdriverIO (WDIO), Selenium WebDriver (Java), Cucumber BDD

API & Integration: Karate DSL, REST API Testing, Postman, Bruno

AI-Assisted Testing: LLM-assisted test design & data generation, AI-driven test case generation (Atlassian Rovo), Prompt Engineering for test scenario coverage

Database & Data Validation: MongoDB, SQL, Kafka event stream validation, backend data correlation

Mobile Testing: Flutter, Dart (Android & iOS)

DevOps & CI/CD: Azure DevOps, Jenkins, GitHub, GitLab

Process: JIRA, Agile/Scrum

EXPERIENCE

Senior Quality Engineer L1

March 2026 – Present

Publicis Sapient, Mumbai, Maharashtra, India

- Own end-to-end automation strategy for the Playwright (TypeScript) framework across UI and API layers, integrating LLM-assisted test design to surface edge-case scenarios that manual authoring consistently missed.
- Built AI-powered test case generation agents using Atlassian Rovo (JIRA), converting user stories directly into structured test scenarios and cutting the manual scenario-drafting effort typically required per sprint.
- Automated critical end-to-end business workflows, reducing regression execution time by approximately 60% and accelerating release cycles.
- Validated end-to-end data integrity across distributed systems by correlating API responses, Kafka event streams, and backend records (MongoDB, SQL), catching data-consistency issues before they reached production.
- Led framework-level enhancements for scalability and reusability, restructuring shared utilities and patterns to support multiple concurrent workflows without duplicating test logic.
- Mentor engineers on automation framework design and debugging practices; lead root-cause analysis for production issues escalated from release cycles.

Quality Engineer L2

Nov 2022 – March 2026

Publicis Sapient, Mumbai, Maharashtra, India

- Continued Selenium (Java) and Flutter/Dart-based mobile automation on active projects through early 2023, extending functional and regression coverage across web and mobile platforms.
- Built a UI automation framework using WebdriverIO (WDIO) with Cucumber BDD, standardizing test structure across the team before transitioning tooling.
- Led the migration of the UI automation framework from WDIO to Playwright (TypeScript), consolidating the team onto a single modern framework and improving test execution reliability.
- Developed API automation suites using Karate DSL to validate complex backend integrations and multi-system data flows.
- Created reusable utilities and dynamic locator strategies, reducing code duplication and accelerating test development.
- Integrated automation suites into Azure DevOps pipelines, enabling continuous testing and faster feedback cycles.

- Reproduced and diagnosed production issues, validating fixes ahead of release sign-off to minimize deployment risk.

Software Quality Analyst

Feb 2022 – Nov 2022

Pacific IT Consulting Pvt Ltd, Bengaluru, Karnataka, India

- Performed end-to-end functional, regression, and smoke testing for Android and iOS mobile applications built with Flutter/Dart.
- Built and executed Selenium (Java)-based automation for web application regression testing.
- Executed API testing and backend validation to ensure stable third-party integrations.
- Ran exploratory testing to surface edge cases before release, working with developers on root-cause analysis to cut down on rework.
- Validated fixes and managed defect lifecycle in JIRA to support sprint-based releases.

KEY PROJECTS

OSB (One Savings Bank)

- Automated end-to-end core banking workflows including account onboarding, payments, and loan processing, initially on WebdriverIO (WDIO) and migrating the automation suite to Playwright (TypeScript) based on evolving client requirements.
- Validated complex multi-system integrations across Mambu (core banking), FusionAuth (authentication), and Salesforce (CRM), ensuring seamless data flow and system consistency.
- Implemented automation for compliance-driven scenarios including AML and sanctions screening using ComplyAdvantage (CSOM, TMS) — a niche, high-stakes testing domain within fintech compliance.
- Performed API, UI, and backend data validation using Karate DSL, MongoDB, and SQL to verify transactional accuracy across distributed systems.
- Caught integration defects during pre-release validation across multi-system workflows (Mambu, FusionAuth, Salesforce), preventing them from surfacing as production issues.

Tools: Playwright (TypeScript), WebdriverIO (WDIO), Karate DSL, MongoDB, SQL, Salesforce, JIRA, Mambu, FusionAuth, ComplyAdvantage

RobinHood SuperApp

- Validated Flutter-based mobile applications across Android and iOS platforms, ensuring consistent behavior and UI responsiveness across devices.
- Tested and verified real-time REST APIs and third-party integrations, ensuring accurate data synchronization between frontend and backend systems.
- Performed end-to-end validation of user flows including authentication, transactions, and data updates across mobile and backend layers.
- Executed regression and performance testing ahead of each release cycle, directly supporting app stability across frequent mobile releases.

Tools: Flutter, Dart, Postman, JIRA

EDUCATION

Bachelor of Engineering – Mechanical Engineering, Alamuri Ratnamala Institute of Engineering and Technology, 2016

Higher Secondary Certificate (HSC), 2012 | Secondary School Certificate (SSC), 2010

PRIOR EXPERIENCE

2+ years in manufacturing quality engineering (Nike Energy Pvt Ltd, Bebitz Flanges Pvt Ltd, Pashin Forge Pvt Ltd) — 2018 to 2022, before transitioning into software QA.
